**European Stress Tests for Nuclear Power Plants
National Report**

Dear Mr Lowe,

Please find attached the National Report on European Stress Tests for Nuclear Power Plants in Finland.

In addition to the European Stress Tests, we have carried out a parallel national process on how Finnish NPPs have prepared against loss of electric power supply and extreme natural phenomena in order to ensure nuclear safety.

As part of this process STUK set requirements to Licensees, who gave their answers to these issues on the 15th of December in 2011. Information on these requirements and the corresponding answers are included in the attached National Report.

Yours sincerely,

Director general

Jukka Laaksonen
